

# Software Engineering in Tokyo

## Job Description

HDE, Inc. is a leading cloud-based security provider in Japan. We deliver an additional security layer to companies which are willing to move their systems on to the cloud. Our service HDE One owns over 74% of marketshare in Microsoft Office 365/Google Apps targeted security service area in Japan.

We need talented engineers who can create services which can change the world. Our engineering is to challenge for forefront technology, which nobody never done before. To make our software more valuable, we aggressively adopt new technologies. For programming language, not only we use popular languages like Python and Java, but also we use new or niche languages like Go Language and Erlang. We also aggressively adopt cloud-based infrastructure such as GitHub, Amazon Web Services and Google App Engine. And, we develop cloud-native services by using EC2, S3, DynamoDB, etc.

Conversations in the office will be done in English, so that Japanese communication skill is NOT required. The software engineer position will be within the Cloud Product Development division of HDE, Inc. located in Tokyo, Japan.
